Please reference that chapter for more detailed information. The most ...

[A Case Formulation Approach to Cognitive Behavioural Therapy](#)

A clinical formulation, also known as case formulation and problem formulation, is a theoretically-based explanation or conceptualisation of the information obtained from a clinical assessment. It offers a hypothesis about the cause and nature of the presenting problems and is considered an adjunct or alternative approach to the more categorical approach of psychiatric diagnosis.

The case formulation should be developed in collaboration with the client to ensure engagement and increase commitment to treatment. To develop a strong case formulation, the following steps are recommended (Persons, 2008): Conduct a thorough assessment to determine the presence of specific diagnoses, symptoms, and problems. It's important to create a list of all of the client's presenting ...

Another type of case conceptualization in CFT is a threat-focused formulation. This method takes a longitudinal approach, and links historical difficulties to current fears and safety strategies. This type of CFT formulation is designed to help clients to understand how their personal history has sensitized (or 'trained') their threat system (i.e. what they have learned to fear). It is ...
