When you create your string of elements, each roll has 6 possibilities. Total possibilities is 6 for the 1st, times 6 for the 2nd, times 6 for the 3rd, ... times 6 for the 60th, or $6 \times 6 \times 6 \dots$ etc. $P R (6, 60) = 6^{60} = 4.887367798 \text{ E}+46$ possible ways to create that sequence of 60 dice rolls. If X has more elements than Y , then f is not one-to-one. If X and Y have the same number of elements and f is onto, then f is one-to-one. If X and Y have the same number of elements and f is one-to-one, then f is onto. Pigeonhole principle is one of the simplest but most useful ideas in mathematics. We will see more applications that proof of this theorem. Example - 1: If $(Kn+1)$ pigeons are ...
