The photovoltaics of organic-inorganic lead halide perovskite materials have shown rapid improvements in solar cell performance, surpassing the top efficiency of semiconductor compounds such as CdTe and CIGS (copper indium gallium selenide) used in solar cells in just about a decade. Perovskite preparation via simple and inexpensive solution processes demonstrates the immense potential of ...

The Master of Engineering (M.Eng.) program is designed to meet the need for rigorous and advanced training in the applied aspects of modern technology. It focuses on engineering technology and management. The degree requires the successful completion of eight courses, six of which must be technical courses at the graduate level. A thesis is not required for the M.Eng. degree. However, research ...

For our purposes, a confusion matrix captures the performance of a classifier by showing the number of times the program and an annotator, or two annotators, make any possible pair of joint decisions. The annotator list is the same on both rows and columns. As a simple example, consider two annotators asked to grade the tortuosity of a set of, say, 30 vessels on a 3-point scale, in order to ...
